Banking Dashboard

Problem Statement –

Develop a basic understanding of risk analytics in banking and financial services and understand how data is used to minimise the risk of losing money while lending to customers.

Solution –

With our dashboards which are created using Power BI latest tools helps the company management understand the financial position of the company.

About Dataset –

This dataset basically contains information about bank details ,various client details which consists of multiple tables which are interlinked with each other through keys like primary key and foreign key.

The various tables are Banking Relationship, Client-Banking, Gender, Investment Advisor and Period.

Data Cleaning –

Creating bins for the Estimated Income < 100000 as low and <300000 as Mid with the column named as Income Band in Clients-Banking table.

```
1  Income Band =
2  SWITCH(TRUE(),
3  'Clients - Banking'[Estimated Income] < 100000,"Low",
4  'Clients - Banking'[Estimated Income] < 300000,"Mid",
5  "High" )
```

Processing Fees	Engagment Days	Engagement Timeframe	Income Band	Client ID
0.05	2425	< 10 Years	Mid	IND16101
0.05	5966	< 20 Years	Low	IND26283
0.05	1522	< 5 Years	Mid	IND97689
0.05	1669	< 5 Years	High	IND88778
0.05	4100	< 20 Years	Low	IND92423
0.05	7884	> 20 Years	Mid	IND38441
0.05	1610	< 5 Years	Mid	IND79955
0.05	858	< 5 Years	Mid	IND41067
0.05	725	< 5 Years	Low	IND33193
0.05	8220	> 20 Years	Mid	IND17984
0.05	1161	< 5 Years	Mid	IND34859
0.05	611	< 5 Years	Low	IND55021
0.05	844	< 5 Years	Mid	IND87992
0.05	3351	< 10 Years	Low	IND31796
0.05	1592	< 5 Years	Mid	IND56699
0.05	2639	< 10 Years	Mid	IND35302
0.05	660	< 5 Years	Mid	IND34318

KPI'S:

In which followings KPIS are present :

Total Clients :

Conclusion –

Empowered by modern data visualization techniques, Power BI dashboards are effective tools for financial analysis and risk management in the banking sector. The dashboard provides valuable insights into customer deposits, loans, and overall financial performance, enabling management to identify potential risks and make informed decisions. By comparing total loans against total deposits and assessing the performance of various banking sectors, the bank can evaluate its liquidity position, lending exposure, and business performance. Ultimately, this dashboard supports better credit risk management, improved financial planning, and sustainable growth through data-driven decision-making.
